

## Blue Water Misting – shiploader case study

Blue Water Misting (BWM) was selected by an Australian client to supply its Dry Fog system for use in shiploading operations. The client is located close to a residential area, so the need for dust-free loading systems is paramount.

The system was cost effective and simple to set up on the ship's hatch.

The system was able to suppress all fugitive dust from the loading operations, adding less than 0.25% moisture.

BWM now has systems in Chile (three), Aus (five), South Africa (three), Georgia APM, Oman, Peru, the USA & Spain.

The systems can be fitted to hoppers, ship hatches, shiploaders or within a storage shed.
